House Bill 2091

I, Jack Thimesch as a former Legislature and now a county commissioner am writing in support of house bill 2091. This first biomethane plant will be built in Kingman Kansas. Robert Casad presented us with the idea and then, with our consent, presented the idea to local farmers and organized submission of a petition. Hearings were held and then we formally incorporated District 001. This plant is an opportunity for farmers in this area and surrounding areas to have an additional source of income.

In my opinion this is an advantageous opportunity not only for Kingman County's economical development but also South Central Kansas as a whole. The jobs and revenue this plant will bring to the area will only help to boost the strong Agricultural influence this part of the state takes pride in.

In favor of House Bill 2091,

Jack Thimesch
