Bill # 315

I am a proponent of SB315

Testimony type: ORAL

Name: Kathryn Andries

Shawnee, KS

Dear Committee Members;

Please consider supporting SB 315. This bill supports everyone and goes beyond partisan politics. It doesn't promote anti-vaccine ideas, but rather allows for anyone to obtain a vaccine if he or she desires, while not forcing others to receive one if they do not want one. This bill will not deter people from receiving vaccinations, but rather will protect the freedom of those who choose not to.

Anyone who has a family will benefit from this bill. Without this bill, schools at every level, from daycare to colleges, could mandate a vaccine. This puts stress on families who then must make a choice about whether to continue the education of their child by accepting an unwanted vaccine, or pulling them from school and hustling to find an alternative form of education. Working families with children in daycare are hit the hardest, as they must quickly find alternative care for their young child. Parents often need to take time off work if they cannot find suitable care for their child.

In America, informed consent must be the norm. The Nuremberg code plainly states that medical experimentation is unlawful. In order to avoid the horrors that many experienced in the holocaust due to medical experiments, we need to pass this bill. Do you want to be forced into a medical procedure without your full consent? If not, then I urge you to pass this bill!

Most importantly, there is absolutely NO FISCAL COST to this bill!

This bill helps promote medical freedom for all, which we have seen is very important after the COVID debacle. If we do not want to repeat the past, we must pass this bill now! We all know too well that history repeats itself.

This bill will protect Kansans from the hijacking of our medical system by tyrannical forces, such as the pharmaceutical companies.

Sincerely,
Kathryn Andries
