

2012 Kansas Statutes

48-1601. Declaration of policy; construction of act. It is the policy of the state of Kansas in furtherance of its responsibility to protect the public health and safety:

(a) To institute and maintain a program to permit development and utilization of sources of radiation for peaceful purposes consistent with the health and safety of the public;

(b) to institute and maintain a regulatory program for sources of radiation so as to provide for (1) compatibility with the standards and regulatory programs of the federal government; (2) an integrated, effective system of regulation within the state; and (3) a system consonant insofar as possible with those of other states; and

(c) to provide for the availability of capacity either within or outside the state for the disposal of low-level radioactive waste generated within the state, except for waste generated as a result of defense or federal research and development activities, and to recognize that such radioactive waste can be most safely and efficiently managed on a regional basis. Any state agency or institution acting as a grantee in a federal research or development program which generates low-level radioactive waste within the state shall be required to dispose of such waste in accordance with applicable state law.

The provisions of this act shall not be interpreted as limiting the intentional exposure of patients to radiation, for the purpose of diagnosis or therapy, by persons licensed to practice one or more of the healing arts within the authority granted to them by the Kansas healing arts statute, or by persons licensed to practice dentistry or podiatry within the authority granted to them by Kansas licensing laws applying to dentists and podiatrists.
