

SESSION OF 2016

SUPPLEMENTAL NOTE ON HOUSE BILL NO. 2522

As Recommended by House Committee on
Transportation

Brief*

HB 2522 would authorize a black and white laser engraved photograph to be placed on a Kansas driver's license, instruction permit, or nondriver identification card. Current law requires a digital image in color; that option would be retained. The bill also would specify the image be displayed on the front of the driver's license or nondriver identification card.

Background

The Director of the Office of Special Investigations, Kansas Department of Revenue, provided proponent testimony. He testified a printing process known as laser etched engraving would allow higher resolution images that are very difficult to counterfeit or alter to be used on Kansas driver's licenses and identification cards, and the laser etched engraving process that produces black and white images is less expensive than the color version but produces high-resolution, distinctive images. He stated there are no costs associated with the bill because the Department has not yet decided whether or when to add this feature to the licenses and identification cards.

There was no other testimony.

According to the fiscal note prepared by the Division of the Budget, the bill would have no effect on state revenues

and has the potential to increase expenditures. However, the Department is unable to estimate the additional costs until a credential printing vendor is obtained. Any fiscal effect associated with the bill is not reflected in *The FY 2017 Governor's Budget Report*.
