Subject: medical marijuana testimony

Dear legislators,

Over the past four years, I have become very educated in all that surrounds this plant we call marijuana and the blatant lies that were set in place with the original prohibition that was clearly done for the greed and financial benefit of a few.

I am presenting this testimony today in favor of a life-saving plant that we now know our own Government holds the patent to. Patent number US6630507.

I have attended many hearings and conversations regarding this plant and I am asking you to do your job and pass safe access to the overwhelming majority that now know the truth and want this constitutional right to heal their children and loved ones with a god given plant that government should have never made illegal.

The negative impacts of this prohibition have cost tax payers billions. It has promoted mass incarceration, children being removed from loved ones, veterans left to high suicide rates, forfeiture of peoples homes, cars and money and last but not least...the sick that are left to suffer.

What I have heard in the past from legislators is "our corporate donors will allow CBD" or "I can't support this drug because of my religion"

Well,let me elaborate on your duty.

Your duty is to represent the majority voice of your constituents. It is not to push your own beliefs or ideology on others. You swore to be the voice of the people not your corporate donors and we the people expect you to listen and vote based on that majority voice.

The impact this natural plant has on the human body is nothing short of miraculous and its time to put the myth and "reefer madness" propaganda in the trash and start saving lives.

This bill should be nothing short of the US Patent currently held. If the disease is treatable under this patent then it should also be accessible to those that suffer from those same diseases.

Our veterans, our children, the elderly all benefit without the side effects that stem from pharmaceuticals.

Its time to do your job. End the prohibition and allow safe access to this plant.

Sincerely,
Jennifer Winn

God does not make mistakes...man does.
