

## Testimony Opposing HB 2205

I, Anastasia Sims, strongly oppose HB 2205.

1. There are zero safety studies for the current childhood vaccine schedule. Adding more vaccines to this untested schedule is unsafe and unethical. Further safety studies on the current schedule should be completed prior to adding any new inoculations.
2. Meningococcal is not easily spread through the classroom/school setting.
3. The Meningococcal vaccine is linked to Guillain-Barre Syndrome (GBS), which according to the FDA, “ is a serious neurological disorder that can occur, often in healthy individuals, either spontaneously or after certain infections. GBS typically causes increasing weakness in the legs and arms that can be severe and require hospitalization.”

Please consider this testimony. I absolutely oppose this.
