

February 11, 2020

Dear Chairman Huebert,

I am in full support of HB 2601, limiting the mandate of vaccines.

There has never been a true safety test on the use of vaccines. With the use of vaccines we place ourselves and our children at risk to vaccine injury and even death (as listed on the vaccine inserts). Where there is a risk there must be a choice. The government should never have the power to tell its citizens what they must do to their own bodies or to the bodies of their children. When the government mandates things for children they are taking away the rights of parents. We the parents are the ones who are to look after our children not the government.

There is things in vaccines that should never be injected into our bodies. Such as the DNA fragments of other humans and animals. Where are the true medical studies that show this is safe for us? There are none. What about all the other ingredients in vaccines as they are multiplied with every injection. And how many more vaccines will be required? The list of vaccines in the making is long.

Why are vaccine manufactures not held liable for vaccines injuries if vaccines are "safe"?

We MUST protect our families and not the vaccines manufactures.

Thank you,
Elizabeth L Alvarez
