Chairman of the Education Committee

Regarding proposed Bill to limit KDHE ability to add mandatory vaccination to the current children's schedule.

Dear Chairman and Committee Members,

I am a mother, grandmother, and registered nurse. I am writing regarding my 9 month of grandson Bryson. He has currently been on schedule to receive his vaccinations and after his last series we noticed that he was continually sick and developed respiratory issues, infections, and milk/dairy allergies when he was perfectly healthy prior to his last series. We stopped his vaccination schedule while I then started my research into the vaccinations he had received to date. As a registered nurse, I know how to look up research studies, data, and I started reading the vaccination inserts. What I found truly scared me. I had never been taught the complications in my practice or in school. He will no longer be subjected to toxic substances.

It states on the vaccine inserts what all the complications and side effects are. These are not listed out on the blue/pink sheets you get from the doctor's offices. It also states that they are not tested for causing cancers, the ability to mutate cells in your body, or fertility complications. This is listed on 13.1 on every insert. I then researched into the effectiveness of the vaccinations. They are neither safe nor effective. This as a medical provider scared me that we are injecting our most vulnerable population with known carcinogens. You can read on the FDA and CDC websites if you pull up the specific ingredients and they are listed on the American Cancer Society's website of causing cancer. We were always taught in nursing school to follow the money. How much is the health of our children worth? For myself it cannot be bought off.

In my practice as an emergency room nurse and teaching pediatric courses. I have seen the drastic health decline of our kids here in Kansas over the past 15-20 years. Childhood cancer is skyrocketing, all sorts of allergies, autoimmune disorders, skin and gastrointestinal issues are at a never seen before rate. The fact that more and more vaccinations are getting mandated for children to attend school at an astonishing rate. Did you know the longest a vaccination has been studied is 10 days? A Vaccine has never studied against double blind placebo studies which is the gold standard.

I am now fighting for my grandchildren and the public to know the facts behind vaccinations. I have studied the bodies responses and outcome due to vaccinations. As I have already stated... they are neither safe nor effective! Vaccination does not equal immunity. It is not the same thing.

No government agency has the right to mandate vaccinations. It is our constitutional right to choose what goes into our bodies and our children's bodies.

Thank you

Karen Carr, Mother, Grandmother, & Registered Nurse
