Re: HB 2601

Dear Education Committee Members,

I believe that important health decisions should be decided by citizens and families with the advice of their personal health care providers - not mandated by government. I have some serious concerns about aborted fetal tissue and human embryos that are currently being used in the manufacturing of some vaccines. Right now, it is difficult to even have a public conversation about the reasons behind this. Thank you for considering my family's concerns and for preserving health care freedoms.
