

Re: HB 2601

February 11, 2020

Dear Representative Huebert, Chairman of the Education Committee,

I am a mother to four children for whom I am responsible for their health and well being. I have children that are vaccinated and also children that are not and have witnessed the difference in health. My children with no vaccines have no allergies, never had an ear infection, never been prescribed antibiotics, and are overall much healthier children than the vaccinated children in our home.

How to treat my children when they are ill should be left in my husbands and my hands. Any medical treatment whether small or large, including vaccinations, should be decided by the parents for their children without mandates. Mandated vaccinations goes against parental rights.

Thank you,

Amber Davis
