

HOUSE BILL 2184 – MEDICAL CANNABIS

TESTIMONY OF **STEPHAN KRISHACK**

Good morning members:

My name is Stephan Krishack, President & COO of Green Healthcare Solutions Kansas, LLC, and I'm very honored to be speaking with you today.

I'm a service-disabled veteran and have been involved in the medical cannabis industry since 2015.

Our company, GHS Kansas, has been involved in Kansas over the last 12 to 14 months in a series of meetings with key local stakeholders about the propriety of establishing a medical cannabis program.

As soon, Bill 2184 passes, GHS Kansas will begin the early stages of Kansas based operations.

Using our own capital and our best subject-matter experts from around the country, we will begin with design, pre-construction, and construction activities on a facility or facilities to cultivate and process medical cannabis

I have significant experience in construction & security nationally and internationally, including in conflict and war zones, and I can assure everyone that the facility or facilities we construct and operate will be ultra-secure, safe for the community, state of the art, and once fully operational, will result in a large number of new, well-paying jobs, including six-figure jobs.

That's just the beginning, once our secure dispensaries are open and as your Kansas market matures and additional companies providing cultivation, processing, and dispensaries are brought online, the economic benefits to the State, the universities, the patients, and the local business community will be profound and truly something to behold.

Again, we're very excited and look forward to helping Kansas create what we believe will be the country's premier medical cannabis program.

Thank you.

Stephan Krishack - Green Health Care Solutions Kansas, LLC
