Proponent of HB 2498

Dear Madam Chair Landwehr and the House Committee on Health and Human Services:

The people of Kansas do not want mandates affecting their health care. Our Constitution guaranties the right to life, liberty, and the pursuit of happiness. Any government mandate violates these rights. It is as simple as that.

This particular mandate, to give the mRNA experimental “vaccine” to children is especially troubling. The way it works is to inject a viral gene into children’s cells. This forces their immune system to manufacture spike proteins to mimic the original covid spike protein. The immune system then makes millions of spike proteins that are toxic and can damage organs, the brain, nervous system, heart and blood vessels including blood clots. This can cause fundamental changes to their immune system. Once the damage has occurred, it is irreparable.

This “vaccine” has been shown to not prevent covid or reduce transmission. Many side effects are being reported among young people including myocarditis, high blood pressure, blood clots and sudden death. So WHY would we give this to developing young children? Side effects may show up years later.

Vote YES to HB 2498 to protect our children. This should apply to future pandemics as well. Any new medical treatments should be well researched and tested, and the results should be available immediately to the public, (not hidden for 75 years to protect Pfizer from the truth).

These “vaccines” do not work as evidenced by the need for subsequent injections possibly every 6 months. The risk for harm increases with each additional injection. Protect our children. Thank you.

Sincerely,

Thomas Hoskins, Pharmacist for 45 years, Pharmacy owner for 25 years
Hesston, Harvey County, Kansas
House District 74
