Re: HB 2203

As A licensed asbestos abatement contractor in the state of Kansas, we are looking for your support on HB 2203. Having a close working relationship with the bureau of air and in particular the asbestos division has been extremely helpful with job safety and information. Allowing them to keep the funds we pay in notifications, licensing, and fines, it would allow them to provide better oversight of the contractors doing their work in the field.

We here at Bradburn pride ourselves on doing a quality job, safety and adhering by the rules. We all know there are contractors out there that do not take the KDHE mandates as seriously as we do, it makes things extremely difficult to bid projects when you have contractors taking shortcuts. We would welcome the extra abilities to increase the funding to this office and would assist the much-needed change out in the field.

If you have any question about how we conduct business or interact with KDHE please do not hesitate to contact me direct.
